

USE OF THE OZONE GENERATORS IN THE HOSPITALITY

The approach to sanitation has become very important.

We are going towards a gradual restart for hospitality activities, and making guests sure to stay in a sanitized and safe environment has become an important service for hotels, lodges, farm holidays and B&B.

What does a sanitized environment mean?

It means an environment that is not only clean but also free of bacteria and viruses, potential sources of disease, free of parasites (mites and various insects) and free of mold.

Guests who arrive and stay for business or tourism for one or more days, inevitably carry with them a very high number of very small microorganisms that go to settle on surfaces and carpets.

To sanitize environments, cleaning with detergents that only remove dirt is not enough it is necessary to use specific disinfectant substances that could give the following problems :

1. Strong odors that persist in the environment
2. They do not allow treatment in the most hidden corners: under tables, under beds, in dead corners inside the wardrobes.
3. Cannot be used frequently on mattresses.
4. Often need rinsing

A VERY VALID ALTERNATIVE FOR SANITIZATION, AFTER NORMAL CLEANING WITH DETERGENT, IS THE USE OF A SANISIRMAN OZONIZER

Ozone is a sanitizing substance recognized by the ministry of health
